

How Can I Use Apps in the Classroom?

Apps have changed the landscape of education. Students now have far more options for study and test prep than they did 15 years ago.

We want our students to study and we want them to have tools that match their learning style. However, the quality of study and test prep varies widely among apps. Educators don't always know what students are getting.

When screened for content and functionality, apps have a place in the classroom. Here are some suggestions for using apps in your class:

Discussion Questions: Ask students to bring in challenging questions from the app. These are great fodder for discussion. This also allows you to gauge how much students are studying and it encourages other students to study.

Class Activity: If you have extra time at the end of a class, use the app to go through study cards or review questions. You can usually choose by topic—or randomize from the whole app if the NREMT is near—and it won't take any time to prepare.

Assignments: Use app content for homework, supplemental exams, extra credit, or remediation. You can assign a section of an app just like you can assign a book chapter. Students usually consider this more appealing than book work.

Beyond the classroom, students can use their study apps during downtime in internships, before or after class, or whenever they have a free moment. Apps are quick and convenient tools for review and reinforcement of concepts learned in class, as well as invaluable preparation for summative and NREMT exams.

Advantages of Limmer Education Products:

- **High-Quality.** Our content is created and vetted by some of the best minds in EMS, including former NREMT personnel.
- **Always Up-to-Date.** The apps are regularly updated to keep up with changes to AHA guidelines, best practices, and NREMT formats. Most recently, all of the Registry's newest question styles have been added to our products.
- **Good for Students, Good for Educators.** Through LC-Ready.com, you get a dashboard to view student and aggregate classroom scores. Students can email their results directly to you and work in study groups within the apps.

Ideas for using our most popular products in your classroom:

EMT Review Plus - AEMT Review - Paramedic Review Plus - Paramedic Review Modules - ACLS and PALS Review

- Assign study cards and review exams for each module of the course.
- As you get near the end of class, assign students exams in the test section. This begins the integration of material learned throughout the class and starts exam preparation before they finish the program.

EMT PASS - AEMT PASS - Paramedic PASS

- As a capstone assignment after completing a major area of study in class, assign a group of topical review questions from the app.
- For extra credit at the end of the course, assign an exam from the section of the app containing simulated final exams—it helps students get into the exam state of mind!
- Early in the semester, assign PASS app work to help students understand the nature of the NREMT and prevent overly-linear thinking.
