## EMT Discussion Board Questions

### Special Populations: Obstetrics/GYN

Two positions are used to transport pregnant patients who are experiencing problems during the third trimester. One is with the supine patient rolled slightly to the left (putting padding under her right side), and the other is elevating the hips/head-down position.

What is each position used for?

How does each position help the patient and fetus?

The supine patient should be rolled to the left by propping pads under her right side. This prevents supine hypotensive syndrome.

Elevating the hips/head-down position is used in conditions like prolapsed cord and limb presentation to use gravity to slow down the birth process.

Define each of the following conditions. Identify the ones which are likely to be delivered in the field successfully. Explain why.

- Single birth
- Multiple births
- Breech presentation
- Limb presentation
- Prolapsed cord

The single birth and multiple births may be delivered in the field successfully. Multiple births may be of lower birth weight and delivered before full term, so caution is advised.

Breech birth may deliver, but potential complications are higher.

Limb presentation and prolapsed cord are not delivered in the field.

## EMT Curriculum Correlation Guide

### About the resources in this curriculum guide:

#### EMT Audio Lecture apps

We have two audio lecture series (EMT and AEMT) as well as a pathophysiology audio series for EMTs and AEMTs. These can help students get the equivalent of an insightful lecture or a solid review to supplement coursework. For details and pricing, visit <http://bit.ly/LCReady-Audio>

#### EMT Review Plus app

The EMT Review Plus app contains over 1,100 items including study cards, review questions and NREMT-style practice exams, with a rationale for every answer. Critical thinking, medical terminology and pathophysiology are included. For details and pricing, visit <https://bit.ly/EMT-Review-App>

#### Limmer Education website

Our resources are high quality, clinically accurate, and educationally sound, written by the nation's top EMS and allied health experts. Since 2009, our apps have been used in classrooms and by students all over the world. [LimmerEducation.com/products](http://LimmerEducation.com/products)
